Chansa Janpimpa

17/6 Moo 7, Wanyao Sub-district, Khlung District, Chanthaburi Province 22110
Tel. 080-373-8166
Email : chansajpp2003@gmail.com
Github : https://github.com/ChansaJun

Education

2022 - Present
Suranaree University of tectnology
Bechelor of engineering (Computer Engineering)
GPAX : 3.52

2019 - 2022
High School Diploma
Chaiyabhumbhakdeechumphon School
Science - Mathematics program
GPAX : 3.84

Skills

Softskill

- Critical Thinking
- Communication
- Teamwork
- Time Management
- adaptability
- Emotional Intelligence (EQ)

Language

- Thai (Native)
- English (Good)
- Chinese (Fair)

Tecnicalskill

Programming Languages & Frameworks
Python, Go, C, SQL, React (TypeScript), Node.js, Gin, GORM, OpenCV

Web Development
Full-stack web development using React (frontend) and Go/Node.js (backend)
RESTful API design, MVC architecture, database integration (MySQL)

Hardware & IoT
Hands-on experience with Arduino boards

Tools & Technologies
VS Code, GitHub, Postman, MySQL, Arduino ,Google Cloud Platform (GCP), BigQuery, Apache Airflow

Work Experience

Co-op Online System

- Analyzed system requirements and designed the overall system architecture along with relational database schema.
- Developed a full-stack web application for managing internship applications and student reviews.
- Built key features included job posting, application submission, interview scheduling, and result confirmation.
- Created a student review module for evaluating companies post-internship.

Amusement Park Management System

- Analyzed system requirements and designed the overall system architecture and relational database schema.
- Developed a full-stack web application for managing a souvenir shop and displaying park map information.
- Built key features including product creation, editing, deletion, and inventory updates for the souvenir shop.
- Implemented a map module to display detailed information about park locations to all users.

Ethereum Price Prediction

- Developed a time series forecasting system to predict Ethereum (ETH) prices using deep learning techniques.
- Implemented and compared two models: GRU and Transformer, using historical price data (Open, High, Low, Close, Volume).
- Applied preprocessing steps such as MinMax normalization and sliding window sequence generation.
- Evaluated model performance using MSE, MAE, RMSE, and R^2 Score.

Blockchain-Based Insurance Claim System

- Developed a DApp for managing hospital insurance claims using Solidity, Ethereum, and MetaMask.
- Implemented smart contracts to record claims transparently and allow hospitals to:
- Submit and track medical claims on-chain
- Check remaining policy coverage
- View detailed claim info and status
- Monitor all claim submissions in a single dashboard
- Tech stack: Solidity, Ethereum, Web3.js, MetaMask, HTML/CSS
