EDUCATION

Suranaree University of Technology

Bachelor of Engineering in Computer Engineering

2022-Present

GPA: 3.34

Relevant Coursework: Software Engineering, System Analysis and Design, Database Systems, Operating Systems, Object-Oriented Technology, Problem Solving with Programming, Data Structures and Algorithms, Programming Fundamentals, Introduction to Blockchain Technology

SKILLS

Programming Languages: React, TypeScript, CSS, Go, C, Java, Python, SQL

Software Tools: GitHub, REST API, Postman, JSON, Figma, Visual Studio

Concepts: ER Diagram, Agile Development

PROJECTS & CLASSWORK

Store Management System - Parking Modules, Web Application: Team Project

Languages and Tools Utilized: React, Go, TypeScript, CSS, GitHub, Figma, REST API

- Built web modules to manage vehicle entry/exit and parking fee calculation with zone reservation support
- Supported membership-based parking privileges and automated receipt generation
- Collaborated in backend API development and database schema design
- Applied Agile methodology using sprint planning, execution, and review sessions

Dormitory - Student Issue Reporting Module, Web Application: Team Project

Languages and Tools Utilized: React, Go, TypeScript, GitHub, Figma, REST API

- Created an issue reporting and form submission system for student dormitory problems
- Implemented real-time issue tracking with historical status logging
- Collaborated on system use case analysis, user flows, and database schema design

CoopMatch – Internship Matching Web Platform, Web Application: Team Project | In Progress

Languages and Tools Utilized: React, Go, TypeScript, CSS, GitHub, Figma, REST API

- Developing a full-featured platform to support internship coordination among students, academic staff, companies, and administrators
- Contributing to system planning, backend/frontend development, and data flow design in an Agile team environment

Scholarship Management, Web Application: Team Project

Languages and Tools Utilized: HTML, CSS, Solidity, MetaMask, Remix IDE

- Developed an Ethereum smart contract to store and manage scholarship records on-chain using Solidity
- Implemented functions for adding, retrieving, and listing scholarships with payment validation and event logging
- Designed data structures and mappings to store scholarship history and support user-level data access

CAMPUS INVOLVEMENT/VOLUNTEER WORK

SUT Graduation Ceremony Volunteer, Welfare Member

December 2023

- Provided welfare assistance and supported event operations during rehearsal and official graduation day
- Participated in student support and traditional celebratory “Boom” event
